

Test Plan – Amazon Home Page (Main Menu)

amazon_home_mainmenu_tp_001

Introduction

To verify the functionality, usability, and navigation of the main menu on the Amazon home page.

Test Items

- Hamburger Menu (All Categories)
- Search Bar
- Amazon Logo (Home Redirect)
- Account & Lists
- Returns & Orders
- Cart Icon
- Category Links (Electronics, Fashion, etc.)
- Language & Location Selector

Features to be Tested

- Menu opens/closes correctly
- All category links are clickable
- Navigation redirects to correct pages
- Search functionality works with valid/invalid inputs
- Cart icon shows correct item count
- Account section redirects properly
- Responsiveness across devices

Features Not to be Tested

- Backend order processing
- Payment gateway
- Product recommendation algorithm
- Ads/personalized suggestions

Approach

- Black Box Testing
- Functional Testing
- UI Testing

- Automation using Selenium

Item Pass/Fail Criteria

- Pass: All menu items function as expected
- Fail: Any broken link, incorrect redirection, or UI issue
- **Suspension Criteria**
- Server down
- Page not loading
- Major UI crash

Resumption Criteria

- Server restored
- Page loads successfully

Test Deliverables

- Test Cases Document
- Test Execution Report
- Bug Report
- Test Summary Report

Testing Tasks

- Write test cases
- Execute test cases
- Log defects
- Retest & regression testing

Responsibilities

- QA Engineer: Test execution
- Developer: Bug fixing
- Test Lead: Monitoring & reporting

Schedule

- Test Planning: Day 3
- Test Design: Day 4-6
- Execution: Day 7-9
- Reporting: Day 10

Risks & Contingencies

- UI changes frequently → Update test cases
- Network issues → Use stable connection
- ---

Test Plan – Amazon Fresh

amazon_fresh_tp_002

Introduction

To validate the functionality and usability of Amazon Fresh including product browsing, cart management, and order placement.

Test Items

- Fresh Home Page
- Grocery Categories (Fruits, Vegetables, Dairy, etc.)
- Product Listings
- Add to Cart Button
- Quantity Selector
- Delivery Slot Selection
- Address Selection
- Checkout Process
- Offers & Discounts

Features to be Tested

- Product search and filtering
- Add/remove items from cart
- Correct price calculation
- Delivery slot selection
- Address selection functionality
- Checkout flow
- Availability of items based on location

Features Not to be Tested

- Payment gateway integration (detailed testing)
- Backend inventory system
- Third-party delivery tracking

Approach

- Black Box Testing

- Functional Testing
- Integration Testing
- Automation using Selenium

Item Pass/Fail Criteria

- Pass: User can successfully browse, add items, and proceed to checkout
- Fail: Any error in cart, pricing, or checkout

Suspension Criteria

- Service unavailable
- API failure
- No products loading

Resumption Criteria

- Services restored
- Data loads correctly

Test Deliverables

- Test Cases Document
- Defect Report
- Execution Report
- Final Test Summary

Testing Tasks

- Test scenario design
- Execution
- Bug tracking
- Regression testing

Responsibilities

- QA Tester: Execution
- Developer: Fixing issues
- QA Lead: Supervision

Schedule

- Planning: Day 3

- Design: Day 4-5
- Execution: Day 6-8
- Reporting: Day 10

Risks & Contingencies

- Product availability varies → Use test data
- Location dependency → Test with multiple addresses
